## Ringkasan pekerjaan

- Current live URL <https://www.sesoris.com/category/outdoor-travel> returned 404 before deploy.
- Implemented local code for Outdoor Travel category, SEO title/meta/intro, 5 content sections, related internal category links, and 4 mapped travel products.
- Production build passed and local production server renders /category/outdoor-travel with HTTP 200.

## Bukti spesifik

- Changed `src/data/products.ts` and `src/data/categoryContent.ts`.
- `npm run build` passed: 370 static pages generated; category route includes 9 category paths.
- Local verification: `http://localhost:3123/category/outdoor-travel` returned 200 and contained Outdoor Travel/travel organizer copy.
- Live URL still 404 because this code has not been deployed safely from the dirty worktree.

## Catatan lanjutan

- Deploy after reviewing unrelated existing dirty changes, then verify live 200 and submit the category URL to GSC.
