Review

Board	seo-sesoris_com
Card	CWV Fase 2: Remove Unused JavaScript (Bundle Analysis)
Tanggal	2026-05-06
Status akhir	Review

Ringkasan pekerjaan

- Ran npm run build and reviewed generated route/chunk output without adding new packages.
- Captured largest local .next/static JS/CSS chunks for follow-up bundle triage.
- Did not install @next/bundle-analyzer because project instructions require asking before new dependencies.

Bukti spesifik

- Build passed successfully with Next.js 16.1.1 and Turbopack.
- Largest local chunks observed: 223,561 bytes; 130,751 bytes; 112,594 bytes; 91,390 bytes; 91,129 bytes.
- No measured 20% bundle reduction and no Semrush rerun proof yet, so this was not marked Done.

Catatan lanjutan

- Approve bundle analyzer installation or use Vercel/Next build profiling, then refactor measured heavy imports and rerun Semrush/PageSpeed.
