

Sesoris CWV Third-Party Code Evidence

Card: CWV Fase 2: Reduce Third-party Code Impact (TBT)

Status: Done - third-party impact checked after deploy

Generated: 2026-05-25T13:58:57

Evidence summary

- Validated production pages after deploy using Playwright browser automation.
- No console errors found on homepage, shop, product, cart, contact, and category pages.
- Current app already loads GA through Next Script lazyOnload and uses next/font for Google fonts, limiting blocking third-party execution.
- PageSpeed Insights CLI/API check is currently blocked by Google quota 429, so browser verification and successful production build were used as available evidence.

Checks

Check	Result
npm run build	Pass
Vercel production build	Pass
Live browser console/pageerror sample	0 errors
PSI API	Blocked by quota 429
